Subject: Conflicts Mineral Declaration

Our Dear Customer;

ELSAN's products are manufactured from scrap copper, electrolytic zinc and electrolytic lead. Conflict minerals such as Tantalum, Tungsten, and/or Gold are not directly used in our product. Only in CB757S brass ingot alloys we produce, average 0.08% 'tin' is used (annual consumption is approx. 1-2 tones). The tin supplied from the Turkish domestic market is Indonesian origin. Tin, which is present as an 'impurity' in the chemical composition of brass bars, comes from our scrap copper raw material.

We declare that our products are not containing Conflict Minerals sourced from conflict areas.

Kindly Regards,

F.Özlem UĞUR
